

MagMutual

Application based on mobile OS: iOS 4.0 or later

iOs Application for Insurance Industry

MagMutual is a mobile application made exclusively to meet the needs of a mutual insurance agency providing limited liability insurance to health (esp. medical) professionals. The application is intended to meet the needs of Mag Mutual insurance policy holders and stakeholders, giving access to account information, pertinent updates, as well as access to educational content provided by the company.

The Major Areas

MagMutual app covers three major areas the company wants to interact in with its stakeholders:

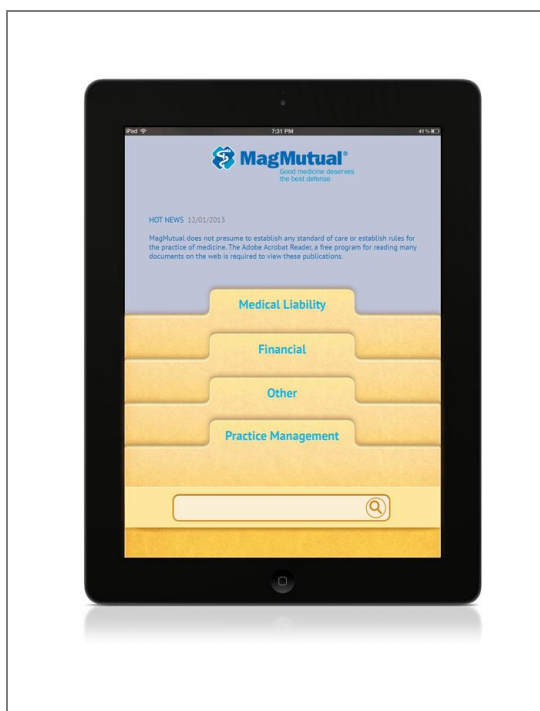

- Provide up to date policy information and in-pocket professional field updates
- Serve educational resources, with test material available in several test modes
- Keep stakeholders informed of products and services available from the company, as well as events in the geographical vicinity to the app user.

Main App Features

- Manage your policy: view and update information, request services, and quotes, track claims
- File a medical liability claim
- Get hands on recent legal developments and medical research, as well as the most relevant medical and insurance news
- Receive policy alerts or general updates directly to the user's mobile device. News and critical alerts are available in a number of specialty areas (updated daily)
- Search the entire Mag Mutual information knowledgebase databases right in app
- Save and email articles, share articles on Facebook, and read offline. No Internet connection required

- Perfect professional knowledge with Mag's huge selection of Continuing Education activities in specialty areas. Save activities, email activities, track credits earned, and more

User Interface

Technical Requirements

Compatible with iPhone, iPod touch, and iPad. Requires iOS 4.0 or later.
