

LitRes: Launcher

Application based on mobile OS: Android 2.2 and up

What is LitRes: Launcher?

LitRes: Launcher for Android tablet PCs was created by request of LitRes, a aggregator, distributor and marketer of licensed electronic books in Russia and the CIS countries. The LitRes company offers its customers a huge selection of e-books and thousands of audiobooks, which can be conveniently accessed from any electronic device.

Android Multifunction Launcher Module

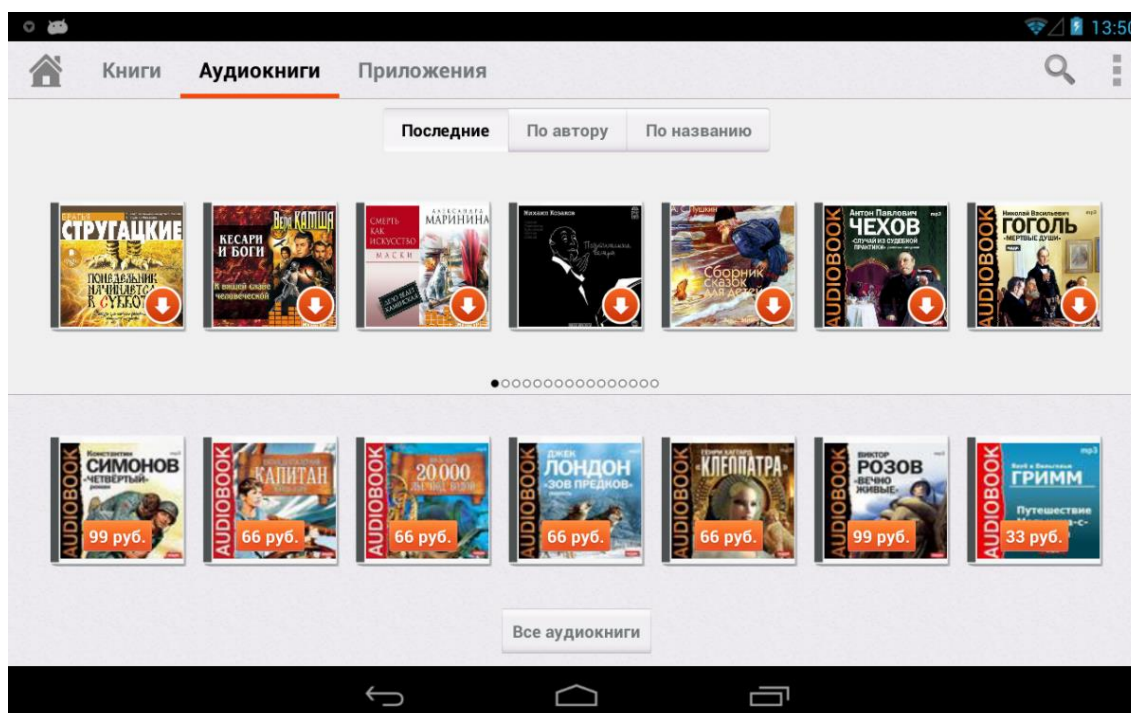

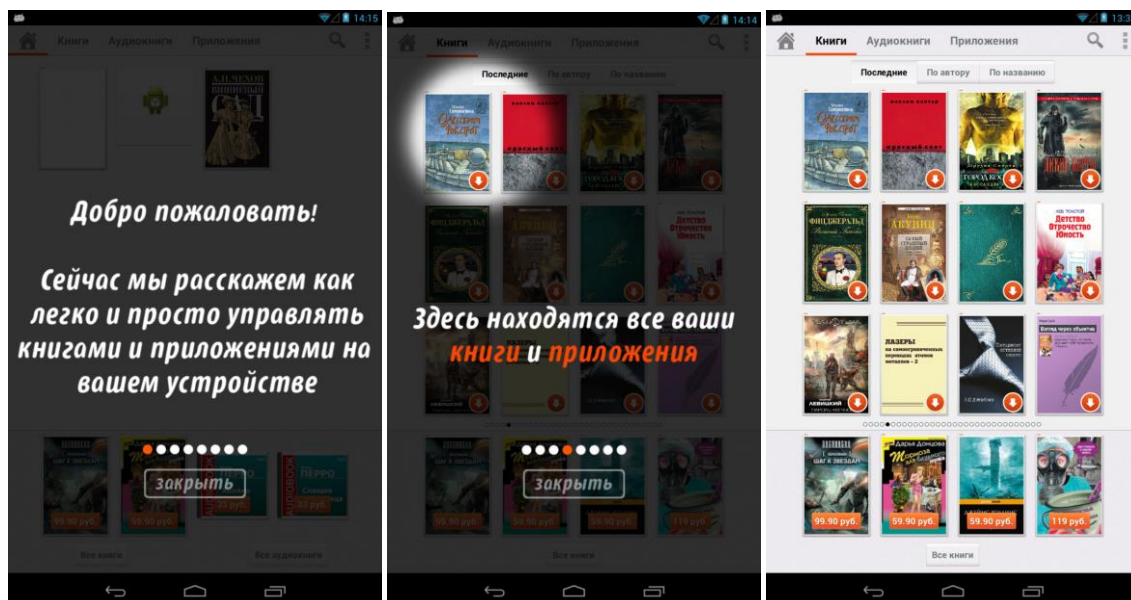

LitRes: Launcher is a module that collects all your e-books and electronic books from LitRes store in one device. Now you'll be able to easily manage electronic books on your device together with files and installed applications. LitRes customers with LitRes: Launcher installed on their Android tablets get access to all services of LitRes online electronic catalogue, the largest e-library in the Russian internet.

Functions and Possibilities of LitRes: Launcher

- Serves as a management system for LitRes products on your device:
 - provides wide searching possibilities by purchase date/title/author/genre, as well as preview options
- Serves as a file and application management system on the device, displays the device contents by the following categories:
 - e-books;
 - audiobooks and audio files stored on the device;
 - video files stored on the device;
 - applications installed on the device.
- Convenient "Home Screen" displays the user activity history – books, applications, etc. previously opened
- Provides quick access to the personal LitRes account with the option to purchase new e-books and load them into the device

- Displays the promo-block (under “All Books”, “All Audio Books”) which provides instant access to the online store and purchasing options.

User Interface

Technical Requirements

The application works on Android devices with operation system version 2.2 or higher.
